

Understanding the Basics

ENZO Gut Repair is a particularly useful nutritional formula to re-balance the gut flora, and heal gut-based imbalances that affect the immune and nervous system.

It acts as a Pre-biotic and natural anti-inflammatory specifically formulated to support the establishment and maintenance of a healthy gut flora, and promote non-inflamed gut walls with healthy barrier function.

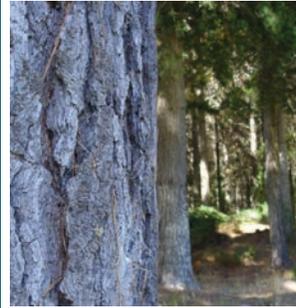

ENZO Gut Repair does not supply live bacteria, like so many pro-biotics. Instead, ENZO Gut Repair provides a high concentration of specifically selected plant nutrients that act on the cells in our intestinal walls and on the microbes present in our gut.

Providing bacteria by themselves, like most pro-biotics, is often only a temporary solution because our gut flora constantly shifts depending on the nutrients we supply our gut bacteria with. Taking ENZO Gut Repair will lead to a general shift in the gut flora towards the dominance of a healthy microflora.

1. Promotes growth of desirable bacteria and suppresses harmful bacteria.
2. Promotes a healthy, non-inflamed gut environment and gut barrier function.
3. Supports the health of the gut-based immune and nervous systems.

Individuals that will benefit most include those with digestive intolerances, gut inflammation and leakiness, metabolic imbalances, weight problems, as well as brain, behaviour and psychological complaints often caused by gut dysbioses.

Each capsule of ENZO Gut Repair™ provides these unique plant nutrients:

ENZOGENOL® - NZ Pine Bark Extract:
with Polyphenols, OPCs, Flavonoids & Stilbenes (100 mg)

POMx® - Pomegranate Extract:
with Punicalagins & Ellagic Acid (200 mg)

Novasoy® - Soy Bean Extract:
with Isoflavones: Genistin, Diadzin, Glycitein (75 mg)

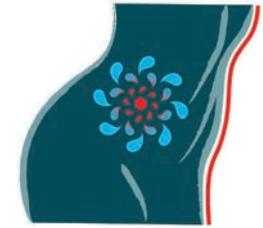

Teahealthy™ - Green Tea Extract:
with EGCG, Catechins & Polyphenols (200 mg)

ENZO Gut Repair is available from select pharmacies, qualified health professionals, and from: www.enzo.co.nz

ENZO Gut Repair™

Ultimate Nutrition For Healthy Gut Function

Boosting Your Nutrition for

- Healthy Beneficial Gut Flora*
- Non-Inflamed Gut*
- Healthy Gut-Barrier Function*
- Healthy Gut-Immune System*
- Healthy Gut-Brain Axis*

 **ENZOGENOL®**
Plus Power Polyphenols

Research Findings

The human gastrointestinal tract contains a highly complex ecosystem of various microorganisms, which together create a unique environment within each person.

Our dietary habits are the most important factor determining the microbial diversity that ultimately affects our health.

Importance of our Gut Flora - Did you know that

- the different types of gut bacteria you carry have a huge influence on your overall health, obviously your gut health, but also your immune system and your nervous system?
- we carry about 100 trillion microorganisms in our intestines, more than 10-times the number of human cells in our body?
- we live in close symbiosis with our gut bacteria? While we supply a suitable environment for them, they help us digest food, provide nutrients, train our immune system, and even influence our nervous system.
- what we eat greatly influences the types and numbers of microbes that we host in our gut? Certain foods lead to a healthier gut flora than other foods. Specifically, plant foods, rich in specific plant poly-phenols, have many beneficial effects on our gut flora, because they inhibit the growth of unwanted harmful bacteria, and promote the growth of desirable healthy bacteria.
- Dysbiosis - imbalances in the gut microflora - is often a contributing factor in health complaints that have no obvious connection to gut health, i.e. brain function problems, depression and anxiety, allergies, skin conditions, and more?

Importance of Gut Barrier Function - Did you know that

- your intestinal walls provide a critical function to your health by building a barrier against harmful bacteria, antigens, toxins and pathogens?
- maintaining the function of the gut barrier is crucial to optimal health?
- the right nutrients, especially the polyphenol-type nutrients present in plants, can help restore and promote healthy intestinal walls and healthy barrier function?
- if your gut barrier does not function properly, different-types of harmful antigens can reach your circulation and wreak havoc affecting your immune-system, nervous-system, your brain, your heart, your lungs, your entire body?
- increased gut permeability, commonly known as leaky gut, is the precursor to autoimmune disorders such as Type-I-Diabetes, Rheumatoid Arthritis, Lupus, MS and autoimmune hypothyroidism? It is also the pathway to neurologic dysfunction associated with gluten intolerance, Celiac disease, Autism and ADHD.
- strengthening the gut lining and improving barrier function can help to relieve or prevent the impacts of asthma, arthritis, food allergies, ulcers, Crohn's, ulcerative colitis, celiac disease, autoimmune diseases, alcoholism, chronic fatigue, joint pain, migraines, diarrhea, parasitic infections, dysbiosis, candidiasis, multiple sclerosis, and diabetes, all of which can have their origin in harmful substances penetrating through the intestinal wall.
- Hippocrates once said:
"All disease starts in the gut!"
and recent scientific research is now discovering that this is true for many different health problems.

Happy Gut?

Happy People!
